Club Members Demonstrate Shop Techniques and Jigs

September's demonstrations were quite different from our usual demonstration, in that instead of one demonstrated project, several members stepped to the front and discussed their home grown techniques

and jigs. Below are photos of the devices along with a brief description of the device. (A 'tip of the hat' to Bill Dalton for taking the photos.)

Mark, an employee of Woodcraft, demonstrates a diamond imbedded grinding wheel. It is said to have true balance and wears evenly.

Bob Walker shows his sandpaper holder made from a 2"X4". The slots hold the pieces of sandpaper which are graded by grit size.

Harvey Driver showed the above tool box for gouges which mounts on the lathe stand, in addition to a vacuum tube for tool sharpening.

Dave Barriger demonstrates his depth measuring device for hollow vessels.

Jim Pinckey discussed his hollowing tool.
